

MA Route 2 Corridor IRLP Node 9122	Repeater System		
	W1GZ Fitchburg	W1GCD Gardner	N1WW Athol
Disconnect from current node	73	**73	73
Connect to any node	C 0 (un-key/wait) then enter node number	** then enter node number	Enter node number
Reconnect to MA Route 2 Corridor, Node 9122 without time-out	C 1	** C 1	C 1

General Information:

1. All repeaters are by default always connected to the 9122 MA Route 2 Corridor Reflector
2. You can ONLY control the repeater you are using. For example, if you are on the Gardner repeater you cannot issue and control codes for the Fitchburg or Athol repeaters.
3. Depending on repeater design, link design and/or your CTCSS decode settings; expect no repeater tails or tones or IDs.
4. Always identify your station and intentions before using DTMF tones.
5. After connecting to any node or reflector always identify your station and announce your intentions. For example:
 - a. "This is W1SEX listening on node 1234"
 - b. "KB1QCE from W1SEX on the Alaska reflector"
6. When connected to any node with a four digit node number, after five minutes of inactivity, the node will automatically disconnect.
7. When connected to any reflector with a four digit reflector number, after ten minutes of inactivity, the reflector will automatically disconnect.
8. When any of the repeaters are idle for more than ten minutes (not connected to any node or reflector) the MA Route 2 Corridor will automatically reconnect without a time-out.
9. You may enter the system through EchoLink via the W1GZ EchoLink Node
10. On Sunday mornings at 08:59 hours, the entire system will connect to the 9123 ARES/SKYWARN Reflector
